

Bot Construction Group receives Infrastructure Health and Safety Association Certificate of Recognition

Oakville, ON – October 1, 2016: Bot Construction Group is pleased to receive the Infrastructure Health and Safety Association (IHSA) Certificate of Recognition (COR™) for its construction operations.

“We are pleased to have our commitment to workplace health and safety recognized through the certification program,” said Robert Lane, Safety Officer for Bot Construction Group, who was presented with the company’s certificates at the IHSA Annual General Meeting in September. “The COR standards demand on-going management and worker participation in our safety program, and bring a daily focus to the ‘first priority’ status we place on job safety.”

Under the program, which includes a process of internal and external audit, the COR designation confirms the implementation of a comprehensive health and safety management system that meets national safety program standards and is tailored to the work being performed. The content and approach must reflect applicable statute in the jurisdiction of work, and engage management, supervisors and workers in an on-going program of training, hazard identification and mitigation, monitoring and continuous improvement of health and safety performance.

To maintain COR registration, companies must be able to demonstrate compliance and on-going maintenance of the health and safety program through documented, annual and cyclical program reviews and internal and external audits.

COR is a trademarked health and safety accreditation program of the Canadian Federation of Construction Safety Associations (CFCSA), and is administered in Ontario by the IHSA. More information about the IHSA and COR program can be found at <http://www.ihsa.ca>
